

# Dengue 3 Outbreak, Palau, December 2018 – January 2020

2020 Epi Week 2: January 6 - 12, 2020

## Outbreak Overview and Summary

On Friday, December 7, 2018, the Palau Ministry of Health alerted the public of an outbreak of dengue fever following the first ever laboratory confirmation of two cases with dengue serotype-3. In response to the outbreak, the Ministry of Health activated its emergency response team on December 7, 2018. The team has been tasked with raising community awareness of the outbreak and dengue prevention measures, conducting disease surveillance and reporting, strengthening environmental control measures, and ensuring adequate resources are available to combat the outbreak.

Between January 6 - 12, 2020, there were thirteen (13) new cases reported, including nine (9) residents of Koror state from following hamlets: Ngerkebesang (2), Madalaii (2), Ngerbeched (2), Meyuns (1), Meketii (1), and Ngermid (1) hamlets. Other cases reside in Ngaraard (2), Ngiwal (1) and Airai (1) states.

There have been a total of twenty (20) cases reported to date in the month of January 2020. Of these cases, sixteen (16) were residents of Koror state, including seven (7) from Ngerkebesang hamlet.

The Communicable Disease Unit and the DEH Vector Control Program continue to investigate all reported cases of dengue fever and implement vector control measures.

The Palau Ministry of Health promotes the dengue 3S messages:

- **Search and eliminate** mosquito breeding sites.
- **Self-protect** by wearing insect repellent and ensuring a mosquito-free environment.
- **Seek early consultation** if you show severe signs or symptoms of dengue.

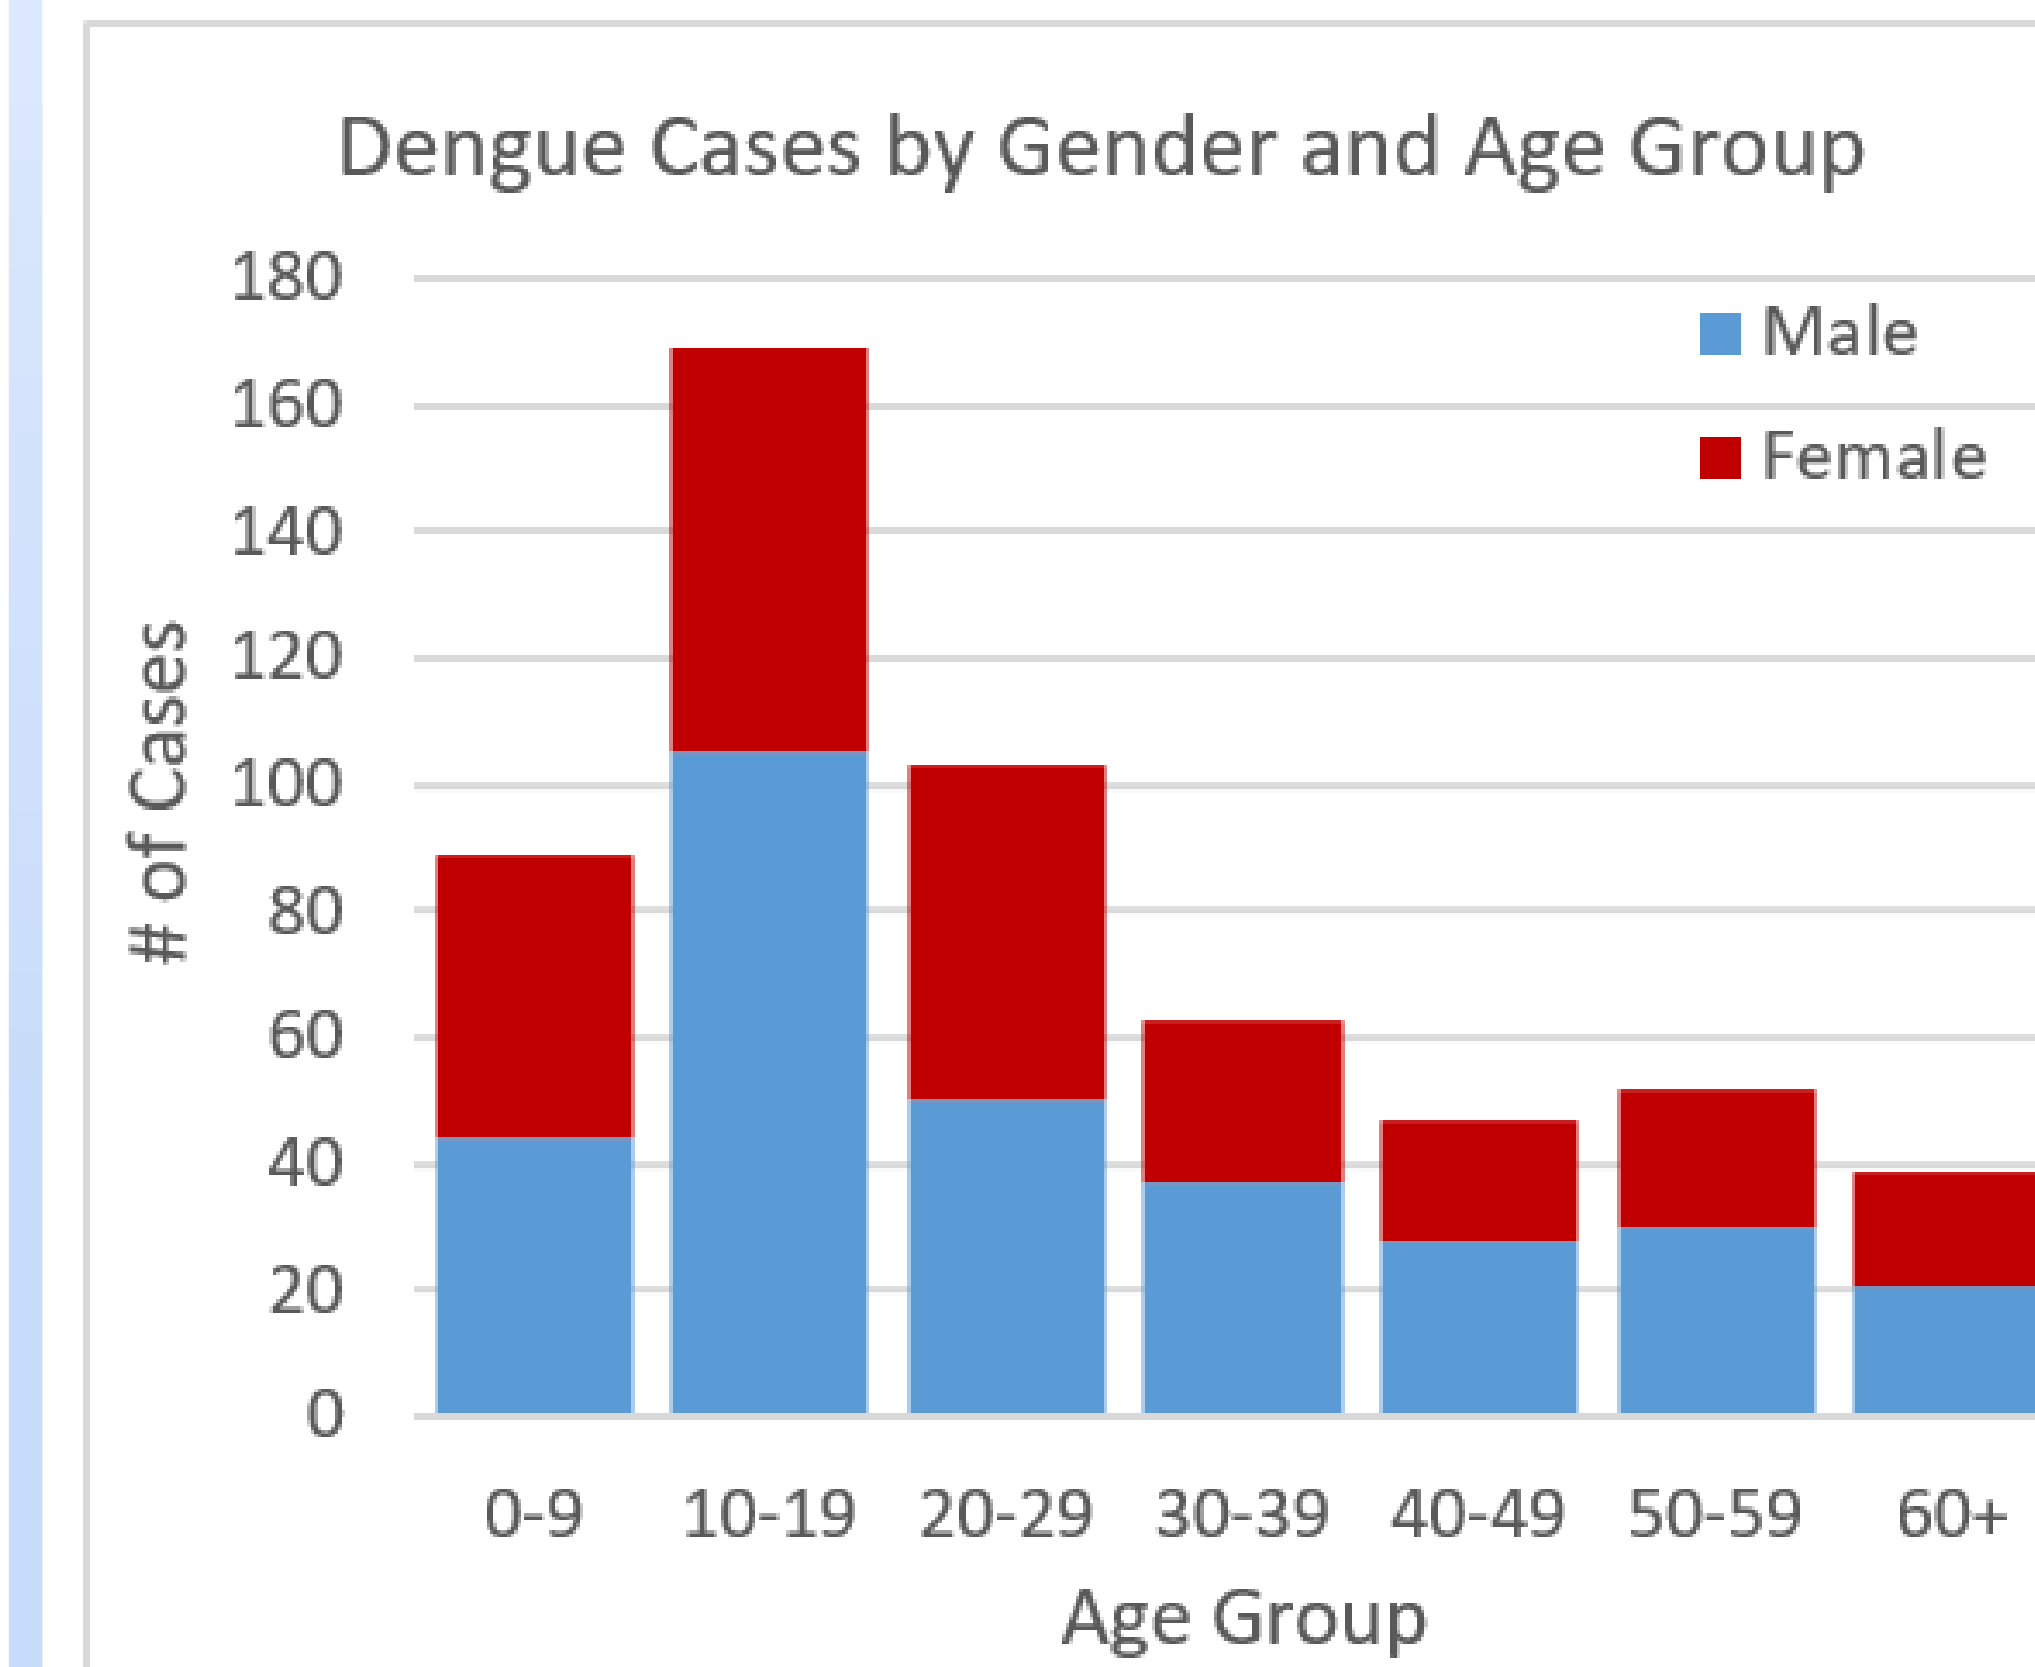

## Case Summary

Hamlet	2020		Oct - Dec 2019		Total since Dec 2018	
	Jan	Dec	Nov	Oct	#	%
