

Dengue 3 Outbreak, Palau, December 2018 – November 2019

Epi Week 45: November 4 - 10, 2019

Outbreak Overview and Summary

On Friday, December 7, 2018, the Palau Ministry of Health alerted the public of an outbreak of dengue fever following the first ever laboratory confirmation of two cases with dengue serotype-3. In response to the outbreak, the Ministry of Health activated its emergency response team on December 7, 2018. The team has been tasked with raising community awareness of the outbreak and dengue prevention measures, conducting disease surveillance and reporting, strengthening environmental control measures, and ensuring adequate resources are available to combat the outbreak.

Between November 4 - 10, 2019, there were seven (7) new cases reported, including four (4) residents of Koror state residing in Ngerkebesang (2) and Ngerchemai (2). Of the eleven (11) cases of dengue reported so far in November six (6) were residents of Koror state, with a majority residing in Ngerkebesang (3) and Ngerchemai (2) hamlets.

The Communicable Disease Unit and the DEH Vector Control Program continue to investigate all reported cases of dengue fever and implement vector control measures.

The Palau Ministry of Health promotes the dengue 3S messages:

- **Search and eliminate** mosquito breeding sites.
- **Self-protect** by wearing insect repellent and ensuring a mosquito-free environment.
- **Seek early consultation** if you show severe signs or symptoms of dengue.

Case Summary

Hamlet	July - Nov 2019					Total since Dec 2018	
	Nov	Oct	Sep	Aug	Jul	#	%
Ngerchemai	2	6	5	19	24	99	20%
