On Friday, December 7, 2018, the Palau Ministry of Health alerted the public of an outbreak of dengue fever following the first ever laboratory confirmation of two cases with dengue serotype 3. This poses a significant concern for public health as the whole population is potentially vulnerable to infection.

In response to the outbreak, the Ministry of Health activated its emergency response team on December 7, 2018. The team has been tasked with raising community awareness of the outbreak and dengue prevention measures, conducting disease surveillance and reporting, strengthening environmental control measures, and ensuring adequate resources are available to contain the outbreak.

Between August 5-11, 2019, there were 29 new cases and. This brings the total from December 1, 2018 to August 11, 2019 to 468 cases. There has been one death attributed to dengue infection during this outbreak.

The next report will be released on Tuesday, August 13, 2019.

**Outbreak Overview**

**Demographics**

- **Age range = 0 – 88 years**
  - **Mean age = 29 years**
  - **Median age = 25 years**

The majority of cases during this outbreak have been Palauan.

**Symptom Profile of Cases**

- **Fever**
- **Chills**
- **Headache**
- **Body pain**
- **Joint pain**
- **Loss of appetite**
- **Altered taste sensation**
- **Nausea**
- **Vomiting**
- **Cough**
- **Eye pain**
- **Abdominal pain**
- **Rash**

**Cases by State and Koror Hamlets**

- **Koror**
- **Airai**
- **Ngarchelong**
- **Ngaremlengui**
- **Ngardmau**
- **Ngchesar**
- **Melekeok**
- **Ngercheeser**
- **Ngeremlengui**
- **Ngerlemet**
- **Ngerkema**
- **Ngermid**
- **Ngarende**
- **Ngerchee**
- **Ngardmau**
- **Ngchesar**
- **Melekeok**
- **Ngercheeser**
- **Ngeremlengui**
- **Ngerlemet**
- **Ngerkema**
- **Ngermid**
- **Ngarende**

**Lab Testing**

- The Belau National Hospital (BNH) Laboratory, four major community health centers throughout the island, and laboratories from three private clinics have the capacity to test symptomatic patients for dengue via a rapid diagnostic test kit, SD Bioline Dengue Duo (Dengue NS1 Ag + IgG/IgM) by Abbott.

- The BNH Lab continues to send a sample of serum specimens to the Hawaii State Laboratory (HSL) for confirmation and serotyping for monitoring.

- There have been 117 serotyped cases of DENV-3. The last recorded cases of DENV-2 in Palau were from November of 2018.

**Response Measures**

The number of reported dengue cases nearly quadrupled from May to July 2019. The areas that were most affected include the most populated state of Koror and nearby states (Airai and Aimeliik), however there have been cases reported from 11 out of 16 states in Palau. All hamlets in Koror have been affected. A majority of cases are teens and young adults.

The Ministry of Health Dengue Response Team is focusing its efforts on increasing community participation in clean-up activities through partnership with state governments and other community organizations. The Koror State Government in collaboration with the Ministry of Health will hold dengue prevention town hall meetings and organize community clean-ups for all Koror state hamlets during the month of August.

The Team continues to provide updates on the dengue outbreak to the community through a weekly radio spot at the national radio station, dissemination of print material about dengue prevention to the community and development of dengue prevention materials aimed at young residents.

The Communicable Disease Unit and the DEH Vector Control Program continue to investigate all reported cases of dengue fever and implement vector control measures.

The Palau Ministry of Health’s community dengue prevention 35 message:

- **Search and eliminate mosquito breeding sites.**
- **Self-protect by wearing insect repellent and ensuring a mosquito-free environment.**
- **Seek early consultation if you show severe signs or symptoms of dengue.**

The next report will be released on Tuesday, August 13, 2019.
