

# Dengue 3 Outbreak, Palau, December 2018 – January 2020

2020 Epi Week 4: January 20 - 26, 2020

## Outbreak Overview and Summary

On Friday, December 7, 2018, the Palau Ministry of Health alerted the public of an outbreak of dengue fever following the first ever laboratory confirmation of two cases with dengue serotype-3. In response to the outbreak, the Ministry of Health activated its emergency response team on December 7, 2018. The team has been tasked with raising community awareness of the outbreak and dengue prevention measures, conducting disease surveillance and reporting, strengthening environmental control measures, and ensuring adequate resources are available to combat the outbreak.

Between January 20 - 26, 2020, there were five (5) new cases reported, three (3) of whom are residents of Koror state from following hamlets: Meyuns (1), Ngerkebesang (1), and Ikelau (1).

There have been a total of thirty-five (35) cases reported to date in the month of January 2020. Of these cases, twenty-nine (29) were residents of Koror state, with the most cases in Ngerkebesang followed by Meyuns and Madalaii.

The Communicable Disease Unit and the DEH Vector Control Program continue to investigate all reported cases of dengue fever and implement vector control measures.

The Palau Ministry of Health promotes the dengue 3S messages:

- **Search and eliminate** mosquito breeding sites.
- **Self-protect** by wearing insect repellent and ensuring a mosquito-free environment.
- **Seek early consultation** if you show severe signs or symptoms of dengue.

## Case Summary

Hamlet	2020				Total since Dec 2018	
	Jan	Dec	Nov	Oct	#	%
